### **DETAILED ACTION**

- 1. The prior actions are incorporated herein by reference. In particular, the response to previously presented arguments.
- 2. Amended claims 31-38 have been entered.
- I. Claims 1-38 are pending.

#### **Drawings**

3. This application has been file d with informal drawings that are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

## Claim Rejections - 35 USC § 103

- 4. Claims 1-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vogel (5,815,683), and further in view of Rosenow et. al. (US 5483596).
- 5. As per amended claim 1, the limitations of a communication system linking client with web server(a global environment via the Internet, figure 2) which determines remote client privileges (obtaining client access, see figure 2) as well as enabling client to select among services (via a Browser figure 4 and column 4 lines 9-19 for computer aided design tools, Column 1, lines 37-40) is disclosed by Vogel ( see figure 2 for clients interconnected to a CAD tool server via the internet and abstract). Vogel is silent on key storage and communication codes, although the codes presumable the codes for such tools are at the server, and security and the keys being stored off site, although

with company proprietary information going over the internet it would be prudent to one of ordinary skill in the art to implement security measures. Rosenow provides a system for accessing files over a switched network for which he does provide for security (figure 1, elements 46, 12, and 50 and figure 2), resource authorization keys and access on the access controller (Figure 2, element 48 and Column 4, lines 47-55). Thus Rosenow authorization keys and resources are located at the server. Claim 1 is rejected.

- 6. Claims 15, consist of a computer based method for implementing 1 and is rejected by the same prior art of record. Claim 29 recites a computer system and means to implement system in claim 1 and is rejected by the same prior art of record. Claim 30 recites a storage medium for implementing claim 1 and rejected in view of the same prior art of record. Claim 31 is a method for receiving the data in an advanced communication and secured network to implement claim 1 and is rejected by the same prior art of record. Claim 37 recites a system plus means for the communication system recited in claim 31. Finally claim 38 recites a computer readable storage medium for the communication system claimed in claim 31.
- 7. All other claims are rejected by their dependency.

#### Response to Arguments

Applicant's arguments with respect to claims 1-38 have been c onsidered but are moot in view of the new ground(s) of rejection.
